UBE2D3

Cat. No.	SBB-CE0019
Lot. No.	163060019

UBE2D3

UBE2D3 is an E2 ubiquitin conjugating enzyme. An E1 activating enzyme is required to attach ubiquitin to UBE2D3 via an active site cysteine. The mechanism of ubiquitin transfer involves the breaking of a E1-Ub thioester linkage, followed by a reformation of a UBE2D3-Ub thioester. UBE2D3 is capable of associating with numerous known E3 ligases including MDM2, which target proteins such as p53 for proteasomal degradation through polyubiquitination. This recombinant UBE2D3 is expressed in *E.coli*.

UBE2D3. Can pair with E3 ligase MDM2 to ubiquitinate p53.

South Bay Bío

Product Information

Quantity: 100µg Molecular Weight: 17 kDa

Concentration: 50 µM, 0.85mg/mL

Purity: >95% by SDS-PAGE

C)

Storage Buffer: HEPES pH 7.5, 150mM NaCl, 10% glycerol, 2mM TCEP

Storage: -80C, Avoid multiple freeze / thaw

Usage: Working concentrations of this enzyme range from 1 to 5μ M.

UBE2D3

Cat. No.	SBB-CE0019
Lot. No.	163060019

Quality Control and Performance Data

Thioester Activity Assay. UBE2D3 forms a thioester with UB in an ATP dependent manner, and the bond can be reduced with addition of excess DTT. The UBE2D3 is active.
