

Ac-Ala-Asn-Trp-AMC

Cat. No. SBB-PS0009

Lot. No. 163060009

South Bay Bio

Ac-ANW-AMC

Ac-ANW-AMC (Acetyl-Ala-Asn-Trp-AMC) is a 7-amino-4-methylcoumarin labeled fluorogenic peptidyl substrate hydrolyzed by the $\beta 5i$ subunit of the 20S immunoproteasome. Chymotrypsin-like activity can be measured using a working concentration of 20-50 μ M substrate. This substrate is specific to the immunoproteasome, and is not hydrolyzed efficiently by the constitutive proteasome. Cleavage of this peptide by the immunoproteasome or other enzymes liberates the fluorophore AMC causing a strong fluorescent signal which is detected at an Excitation wavelength of 345nm and Emission wavelength of 445nm. 20S Proteasome enzyme requires activation with 0.035% SDS in the assay buffer.

Ac-ANW-AMC, Chemical Structure.

Structure of Ac-ANW-AMC, 588.6 Da, Ex=345nm, Em=445nm.

Product Information

Quantity: 2 mg **Molecular Weight:** 588.6 Da

Concentration: Lyophilized **Purity:** >95% by HPLC

Solubility: 10mM in DMSO **Ex/Em (nm):** 345/445

Storage: Store at 4°C after product arrival. After preparing a stock in DMSO (≥ 10 mM) store product at -20°C to -80°C. It is recommended to make multiple aliquots after the first thaw to ensure best performance.

Quality Control and Performance Data

20S Immunoproteasome vs. 20S Constitutive Proteasome Activity.

ANW-AMC exhibits a specificity for 20S Immunoproteasome compared to 20S Proteasome.
